

TEST PLAN

1. Project Information

Field	Details
Project Name	E-Commerce Web Application
Document Name	Test Plan
Testing Type	Manual Testing
Application Type	Web Application
Tester	Neha Bihade
Browser	Google Chrome
Operating System	Windows
Testing Tool	Microsoft Excel
Defect Tracking	Jira
Version	1.0

2. Project Objective

The objective of this testing project is to verify that the e-commerce web application works according to the specified requirements and provides a reliable and user-friendly experience.

The testing will focus on identifying functional defects, UI issues, validation problems, and defects in important user workflows such as login, product selection, shopping cart, checkout, and order processing.

3. Scope of Testing

In Scope

The following modules will be tested:

1. User Login
2. User Registration
3. Product Listing
4. Product Search
5. Product Details
6. Shopping Cart
7. Checkout
8. Payment
9. Order Management
10. Logout

Out of Scope

The following areas are outside the scope of this project:

- Performance testing
- Load testing
- Security penetration testing

- Database testing
- API testing
- Source-code testing

4. Testing Objectives

The testing objectives are:

- Verify that application functions work as expected.
- Identify defects before application release.
- Verify input validations.
- Verify navigation between different modules.
- Verify error messages.
- Verify positive and negative scenarios.
- Perform regression testing after defect fixes.
- Verify that critical business workflows work correctly.

5. Testing Types

The following testing types will be performed:

Functional Testing

Verify that each application function works according to requirements.

Smoke Testing

Verify that the major application functions are working after a new build.

Sanity Testing

Verify specific functionality after minor changes or bug fixes.

Regression Testing

Verify that existing functionality is not affected by new changes.

Retesting

Verify that previously reported defects have been fixed.

UI Testing

Verify layout, buttons, labels, alignment, links, and messages.

Negative Testing

Verify application behavior with invalid or unexpected input.

Exploratory Testing

Explore the application to identify unexpected defects that may not be covered by predefined test cases.

6. Test Environment

Component	Environment
Operating System	Windows 10/11
Browser	Google Chrome

Application Type	Web Application
Network	Internet
Testing Method	Manual
Test Documentation	Microsoft Excel
Defect Tracking	Jira

7. Test Deliverables

The following documents will be prepared:

- Test Plan
- Test Scenarios
- Test Cases
- Test Data
- Requirement Traceability Matrix (RTM)
- Bug Reports
- Test Execution Report
- Test Summary Report

8. Entry Criteria

Testing will begin when:

- Application build is available.
- Requirements are available.
- The test environment is accessible.
- Required test data is available.
- Major application functionality is implemented.

9. Exit Criteria

Testing will be completed when:

- Planned test cases have been executed.
- Critical and high-severity defects are resolved or accepted.
- Regression testing is completed.
- Retesting fixed defects is completed.
- Test execution results are documented.
- Test Summary Report is prepared.

10. Defect Severity

Severity	Description
Critical	Application crash or critical business functionality completely blocked
High	Major functionality is not working

Medium	Functionality works partially or has a significant issue
Low	Minor UI or cosmetic issue

11. Defect Priority

Priority	Description
P1 – High	Defect should be fixed immediately
P2 – Medium	Defect should be fixed in the current release
P3 – Low	Defect can be fixed in a future release

12. Risks and Mitigation

Risk	Mitigation
Test environment unavailable	Inform responsible team and use available environment
Requirements unclear	Clarify requirements before execution
Build instability	Perform smoke testing before detailed testing
Limited test data	Prepare valid and invalid test data in advance
Defect fixing delays	Prioritize defects based on severity and priority

13. Test Case Execution

Each test case will be executed and marked as:

- Pass
- Fail
- Blocked
- Not Executed

Failed test cases will be linked to corresponding defect IDs.

14. Defect Management Process

The following process will be followed:

Identify Defect → Reproduce Defect → Document Defect → Assign Severity/Priority → Developer Fix → Retest → Regression Testing → Close Defect

15. Roles and Responsibilities

Manual Tester

- Analyze requirements
- Create test scenarios
- Create test cases
- Prepare test data

- Execute test cases
- Identify defects
- Report defects
- Perform retesting
- Perform regression testing
- Prepare test reports

Developer

- Analyze reported defects
- Fix defects
- Provide updated build
- Support defect resolution

16. Testing Approach

Testing will follow a structured approach:

Requirement Analysis → Test Planning → Test Scenario Creation → Test Case Design → Test Data Preparation → Test Execution → Defect Reporting → Retesting → Regression Testing → Test Closure

17. Approval

Role	Name	Status
Tester	Neha Bihade	Prepared
Reviewer	—	Pending
Project Manager	—	Pending

18. Conclusion

The purpose of this test plan is to provide a structured approach for testing the e-commerce web application. The testing activities will focus on functional correctness, usability, validation, defect identification, and stability of major application workflows.
